

Defect #1:

requirement: for US, account number is **1-17** character long, can be any character

actual error (when out of required length): Length of account_number should be **between 7 and 11** when bank_country_code is 'US'

Defect #2:

requirement: for AU, account number is **6-9** character long, can be any character

actual error (when out of required length): Length of account_number should be between **7 and 11** when bank_country_code is 'US'

Defect #3:

requirement: for CN, account number is **8-20** character long, can be any character

actual error (when out of required length>20): Length of account_number should be between **7 and 11** when bank_country_code is 'US'

Defect #4:

When the account number < 8, the request was sent successfully when country code = CN, per requirement, we should get an error message

Defect #5:

bsb is mentioned in documentation, but not specified in the sample payload

Defect #6:

when bank country= US but aba=blank, we are supposed to get 400 error, but got 200 succeed code.

Defect #7:

Per requirement, the max length of account number should be 20 for CN, but received an error message when account number length is 20.

Defect #8:

Endpoint can accept swift code length is 9 or 10 (no error message returned). Per requirement, it can only accept length is 8 or 11.
